Online Bakery Management System

Online Bakery Management System provides common platform for customers and shopkeepers. The project provides a list of bakery products displayed in various categories such as Cakes, Sweets, etc. This project allows customers to check for different bakery items available at the shop and then purchase them online using search bar according to category and Rating/Review given by customers. The system keep track of the orders and provides updated status to the customer through emails. The project also allows shopkeepers to register their shop on the same platform and add their products for online delivery which is handled by admin . When customer add products in his cart, customer could see the total amount in cart which is generated automatically. After receiving the product, customer can give rating/review for the product.
